Fund Overview (continued)

ETF will hedge its exposure to U.S. dollars by entering into currency contracts with financial institutions that have an "approved credit rating" as defined in NI 81-102.

BENEFITS OF USING THE FORWARD AGREEMENT STRUCTURE

The Fund utilizes an innovative Forward Agreement structure with the National Bank of Canada in order to provide exposure to a portfolio of global securities on a tax-efficient basis. By using the Forward Agreement, the income generated by the Global Multi-Asset Income Index portfolio (generally foreign income) will be recharacterized and paid to Unitholders of the ETF primarily as distributions of return of capital and capital gains. Another benefit of the Forward Agreement Structure is that it reduces the instances where capital gains may be realized as a result of any scheduled rebalancing of the underlying portfolio.

ETF FORWARD AGREEMENT STRUCTURE

The above diagram is for illustrative purposes only. The forward structure is used to achieve the exposure to the Global Multi-Asset Income Index portfolio. Please see the Prospectus for further information.
